

Laser Anemometry In Fluid Mechanics-IV

Selected Papers from the Fourth Intl. Symp. On Appl. Of Laser-doppler Anemometry to Fluid Mechanics

Editors:

R.J. Adrian, D.F.G. Durão, F. Durst, T. Asanuma and J.H. Whitelaw

Contents

Chapter I Single Phase Flows

- The energy budget in the near-wall region of a turbulent boundary layer. *By T. Gunar Johansson and Rolf I. Karlsson.*
- Linear response of fluctuating forces to turbulent velocity components. *By H. van Radecke and E.O. Schulz-DuBois.*
- Laser Doppler Measurements of mean turbulence quantities, time- and spatial-correlation coefficients in the wake of a circular cylinder. *By L.H.J. Absil.*
- Application of LDA to large wave channels. *By S. Bopp, C. tropea, W. Dursthoff and L. Zhan.*
- The effect of the forest canopy on the separated flow over hills. *By E.W. Adams and B. Ruck.*
- A laser anemometry study of separated flow over a model three-dimensional hill. *By D.F.G. Durão, M.V. Heitor and J.C.F. Pereira.*
- Inlet Valve flow generated by helical ports. *By C. Arcoumanis, E. Cossali, B. French and J.H. Whitelaw.*
- Velocity Measurements in a 5.8 liter stratified-charge rotary engine. *By P.M. Dimpelfeld and P.O. Witze.*

Chapter II Two Phase Flows

- Resolution limits of the phase Doppler technique and its extension to monitor non-ideal fine particles in two-phase flows. *By S.R. Martin, L.E. Drain, D.M. Livesley and M.L. Yeoman.*
- Calibration of single particle sizing velocimeters using photomask reticles. *By E.D. Hirlleman, D.J. Holve and E.A. Hovenac.*
- Turbulent flow characteristics of dispersed two-phase flow in plane shear layer. *By K. Hishida, A. Ando, A. Hayakawa and M. Maeda.*
- Application of phase and laser Doppler anemometry to the measurement of droplet size and velocity in gasoline and diesel fuel injection systems. *By M. Saffmann, G. Fraidl and G. Wigley.*
- Back scattered phase Doppler anemometry (PDA) for spray diagnostics. *By Y. Levy.*
- Evolution of the Two-Phase Flow in the near field of an air-blast atomizer under reacting and non-reacting conditions. *By V.G. McDonnel and G.S. Samuelsen.*
- Simultaneous Laser-Doppler-Velocimetry and particle sizing in the freeboard of a fluidised bed combustor. *By K.G. Berkelmann and U. Renz.*
- Velocity measurements of transparent non-Newtonian pipeline slurries with laser Doppler anemometry. *By J.T. Park, R.J. Mannheimer, T.A. Grimley and T.B. Morrow.*

Chapter III Instrumentation

- Smaller laser-Doppler anemometers using semiconductor lasers and avalanche Photodiodes. *By S. Bopp, F. Durst, R. Muller, A. Naqwi, C. Tropea and H. Weber.*
- Battery-driven miniature LDA-System with semiconductor laser diode. *By S. Damp.*
- Multipoint Simultaneous LDV Optics. *By Ikeda, N. Kurihara, T. Nakajima and R. Matsumoto.*
- Fibre optic transit velocimetry using diode laser sources. *By C.N. Pannell, J.H. Midgley, J.D.C. Jones and D.A. Jackson.*
- Evaluation of signal processing techniques in laser anemometry. *D. Modarress and A. Nakayama.*
- Burst Digital Correlator for LDV signal processing. *T. Nakajima, Y. Ikeda, N. Kurihara and R. Matsumoto.*
- An automatic signal processor for LDV systems. *By L. Jenson, R.K. Menon and L.M. Fingerson.*
- A covariance processor for velocity and size measurements. *By L. Iading and K. Andersen.*
- Processing of phase-Doppler signals using the cross-spectral density function. *By J. Domnick, H. Ertel and C. Tropea.*
- Measurement and refinement of velocity data using high image density analysis in particle image velocimetry. *By C.C. Landreth and R.J. Adrian.*
- Stochastic modelling and performance predictions of PIDV experiments. *By C.S. Moraitis and M.L. Riethmuller.*
- Analysis of turbulent shear flows using photochromic visualisation. *By A. Mueller and D.C. Wiggert.*
